

Blade File Transfer System

What Customers Say

Dundee Precious Metals *In-Brief Case Study*

About Dundee Precious Metals

Dundee Precious Metals Inc. is a Canadian based, international mining company engaged in the acquisition, exploration, development and mining of precious metal properties.

DPM owns the Chelopech Mine, a gold/copper concentrate producer and the Krumovgrad gold project, a mining development project, both located in Bulgaria, and 95% of the Kapan Mine, a gold / copper / zinc concentrate producer in southern Armenia. In addition, DPM holds significant exploration and exploitation concessions in some of the larger gold-copper-silver mining regions in Serbia and owns the Back River gold exploration project in Nunavut, Canada.

Our Customer

Phil Geusebroek, MSc. P.Geol, Senior Database Manager, Dundee Precious Metals Inc answers our questions.

What problems were you experiencing that identified the need for the Blade File Transfer Solution?

We have operations in several remote locations and FTP was not allowing regular backups of company data to be uploaded. Blade was put forward as a possible solution as it was the only product that provided for persistent uploads. IT also informs me that Blade is more secure than an FTP server.

Why did you choose Blade over other technologies?

Blade is the only product on the market that will upload large files over shaky satellite connections. It is extremely robust. A demo showed that no matter how one tried to 'break' the upload, Blade tenaciously picked up where it left off and finished the job. We were so impressed we purchased a group license on the spot.

How are you using the Blade solution?

We are using Blade as a central file transfer repository, instead of an FTP server, to coordinate uploads from five different operations in Canada's arctic, Eastern Europe and Central Asia.

What benefits have you realized since implementing Blade?

We went from 0% upload success to 100% upload success upon installation.

Anything else you want to share?

Blade File Transfer System Server and Client was easily installed and set up.
